Sequence 44, Application US/08479852
Patent No. 5712385
GENERAL INFORMATION:
APPLICANT: Sherrol H. McDonough, Thomas B. Ryder,
APPLICANT: Yeasing Yang
TITLE OF INVENTION: NUCLEIC ACID AMPLIFICATION
TITLE OF INVENTION: OLIGONUCLEOTIDES AND PROBES
TITLE OF INVENTION: TO HUMAN IMMUNDEFICIENCY VIRUS TYPE 1
NUMBER OF SEQUENCES: 139
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 27;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1, Application US/09844915

Patent No. 6936468

GENERAL INFORMATION:
APPLICANT: Robbins, Paul D.
APPLICANT: Lu, Lina
APPLICANT: Glannoukakis, Nick
TITLE OF INVENTION: TOR ENHANCING TOLEROGENICITY IN A HOST AND METHODS FOR TITLE OF INVENTION: TOR BHANCING TOLEROGENICITY IN A HOST AND TITLE OF INVENTION: MAKING THE SAME
CURRENT APPLICATION NUMBER: US/09/844,915
CURRENT APPLICATION NUMBER: 60/200,479
PRIOR APPLICATION NUMBER: 60/200,479
PRIOR PILING DATE: 2000-04-28
NUMBER OF SEQ ID NOS: 7
SEQ ID NO 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2, Application US/09844915

```
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Synthetic oligonucleotide
NAME/KEY: misc_feature
LOCATION: (0)...(0)
OTHER INFORMATION: chimeric phosphorothioate/phosphodiester backbone
OTHER INFORMATION: with phosphorothioate at 5' and 3' ends
US-09-888-326-417

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Publication No. US20050272080A1

GENERAL INPORMATION:
APPLICANTION: Methods of Genetic Analysis of Formalin Fixed Paraffin Embedded & TITLE OF INVENTION: Microarrays

TITLE OF INVENTION: Microarrays

TITLE OF INVENTION: Microarrays

TITLE APPLICATION NUMBER: US/11/121,849

CURRENT APPLICATION NUMBER: 00/567,949

PRIOR APPLICATION NUMBER: 00/567,949

PRIOR FILING DATE: 2004-05-03

NUMBER OF SEQ ID NOS: 673904

SOFTWARE: Microarray Probe Sequence Listing Generator V 1.1

LENGTH: 25
                                                                                                                                                                                                                                                                                                               J.
